

TEST YOUR KNOWLEDGE...

1. The organization center for part of the cell's skeleton.
2. They are made of DNA (deoxyribonucleic acid) and proteins.
3. It has a neutral pH of 7 and a watery fluid called cytosol where many of the organelles are found.
4. It provides the 'bones' for the cell and also the 'muscles'.
5. The 'packing and shipping office' in the cell.
6. They are sacs of acidic proteins that can dissolve bacteria, old cells, organelles, and materials that do not belong in the cell.
7. The 'powerhouse' of the cell.
8. The double membrane around the nucleus in eukaryotic cells.
9. The most prominent part of the nucleus.
10. The 'control center' of the cell.
11. They absorb spare parts.
12. They create the building blocks.
13. Make proteins that will either stay in the membrane or be sent out of the cell.
14. They make fats, hormones, and steroids such as testosterone, estrogen, and adrenaline.
15. This controls the movement of anything into and out of the cell.
16. The most basic unit of life.
